WMS Soil Data Summary 2018-01-08.pdf

Good Morning Omo,

Attached please find data summary tables and a site plan for the subsurface investigation we have conducted for Wilmington Marine Services (the site). The site is owned by the Port of Los Angeles and was leased to Wilmington Marine Services which operated as a boatyard for the refurbishment of yachts, sporting boats, and small commercial vessels.

Wilmington Marine Services went bankrupt a few years ago without fulfilling their lease requirement for restoration of the property. What prompted our investigation was the Port of LA Construction and Maintenance (C&M) wants to expand their yard onto this site. Therefore, we conducted a baseline assessment to determine the current condition of property. We have encountered some elevated metals and PCB concentrations in soil (see attached tables) and are working under the oversight of the US EPA to conduct additional investigation for PCB contamination. We do not want to delay C&M development plans to the extent possible and will likely excavate and dispose offsite any hot spots in soil. We would like to get DTSC's opinion from a regulatory perspective. Please let me know if you need anything else.

Hi Shirin,

If you can provide me with all the pertinent information regarding this project, it will help me better understand the project objectives. Also, I will be able to make any applicable recommendations from our perspective.

Thanks,

Omo
